

RADIATION PROTECTION

YOUR PROTECTION. OUR VOCATION.

Our Mission.

AmRay Group is a global leader in providing radiation protection for the medical, healthcare and industrial sectors in global markets.

Our mission in life is to offer best-in-class protection solutions to diagnostic imaging professionals and the patients they care for.

We do so by providing a wide range of personal radiation protection, produced in accordance with the highest standards of quality specification and independently audited and verified.

This is backed up by a level of personalised service that has raised the standard in our industry and continues to set us apart from our competitors.

William Johnston

Managing Director

YOUR PROTECTION. OUR VOCATION.

WELCOME TO THE WORLD OF AMRAY.

AmRay has been providing radiation protection solutions for over three decades, and has established itself as the innovative and proactive partner of choice to healthcare professionals whose day-to-day lives involve the harnessing of radiation while caring for their patients.

We were founded by one such healthcare professional, so our focus has always been on delivering the optimum levels of personal protection to those who work in healthcare professions.

Setting the standard for verification and transparency.

From day one, we have forged a reputation for exceeding the regulatory standards in our industry, and continue to do so today through our insistence on third party verification and the inclusion of our testing laboratory on all our product certifications.

We are also driven by a commitment to providing customised solutions for those who require something more than an 'out of the box' approach. We do so by working closely with Radiation Protection Advisors (RPA), Radiation Safety Officers (RSO), radiographers and other stakeholders across all our geographical regions, ensuring that we are addressing the real needs of today's market.

A deeply personal approach.

We also offer a level of personalised service that sets us apart from our competitors – everything from a free tracking service (**A-Track**) to garment customisation for radiation professionals that's accessed via our website or by an accompanying app.

Proof of our commitment to product and service excellence is the fact that we are the chosen radiation protectors for hospitals, medical institutions and industrial users right throughout Europe, the Middle East, Asia and beyond.

If you have a requirement for radiation protection, we should be talking to each other. We look forward to hearing from you!

Your Protection. Our Vocation.

MEET THE AMRAY TEAM.

William Johnston

Managing Director

As Managing Director of **AmRay**, I lead a dedicated team of sales and technical professionals as we strive to raise the bar in terms of protecting the health and well-being of our global customers.

E: william@amraygroup.com

Helen Johnston

CEO

A radiographer by profession, my vision has always been to listen to the customer and provide radiation protection garments that are designed with the end user requirements in mind. As CEO, I take a hands-on role in ensuring the quality we're famed for is consistently built on and the original vision is continuously put into practice.

E: helen@amraygroup.com

Anne Canaveera

Key Account Manager

A French national, I have overall responsibility for development of the European mainland market and am a key liaison for our network of agents and distributors. I am in charge of all our quality certifications, ensuring they are embodied in all divisions from manufacturing right through to delivery.

E: anne.canaveera@amraygroup.com

Jane Finnegan

Customer Support

Working across a broad range of areas, my main focus is to ensure our customers' needs are answered, by bringing structure and rigour to our production processes.

E: jane.finnegan@amraygroup.com

Verity Boal

Key Account Manager

I have a solid understanding of the needs of the modern-day medical professional which allows me to expand the **AmRay** footprint in the Irish and U.K. markets. I am the key liaison for customers in these markets and ensure we're doing everything we possibly can to meet their needs.

E: verity.boal@amraygroup.com

AMRAY GOES FURTHER FOR CLARITY AND TRANSPARENCY.

Regulatory updates and improvements are implemented within our sector to ensure that every product bought is fairly and accurately described on the label. Under the most recent updates to IEC:61331-3-2014, it is mandatory that the area density (weight) of the material within the garment is clearly stated. Under this regulation, however, the stated weight does not require certification by a third party.

We strongly believe that the weight of the protective garment is vitally important when choosing our products over others, and that the weight should be verified by an independent body. For this reason, we have requested that the independent test laboratory publishes the area density of our supplied sample on the Test Report provided. This is **YOUR** guarantee that the **AmRay** radiation protective product you buy is as is stated on the label.

THE AMRAY PROMISE.

AmRay is the only manufacturer of radiation protective aprons to offer a **THREE-YEAR GUARANTEE**, which is proof positive of the confidence we have in our product range. This confidence is based on three decades of manufacturing excellence, and is supported by adherence to the highest industry standards, including ISO 9001:2015, Regulation (EU) 2016/425 (Module B & D), IEC 61331-1 :2014 and 61331-3 :2014.

Your Protection. Our Vocation.

THE MATERIALS AT THE HEART OF OUR SUCCESS STORY.

With its high atomic mass and low atomic density, lead has always been the preferred material for protecting healthcare professionals who regularly come in contact with radiation.

At **AmRay**, we offer three different variants, each with their own particular benefits in terms of functionality and cost.

LIGHT LEAD

**IEC 61331-1-2014
COMPLIANT**

**IEC 61331-3-2014
COMPLIANT**

100% LEAD

The perfect solution when needed and in use for shorter periods of time. The ideal choice for medical professionals and patients within radiology, dental, veterinary and nuclear medicine.

LIGHT PLUS

**IEC 61331-1-2014
COMPLIANT**

**IEC 61331-3-2014
COMPLIANT**

LIGHTWEIGHT LEAD COMPOSITE MATERIAL

Combining lead with antimony, all models are significantly lighter than "Light" lead apparel. "Light Plus" is often considered the economical choice for a garment which is comfortable and provides optimum protection.

SUPREME LEAD-FREE

Bi-Layer Technology

**IEC 61331-1-2014
COMPLIANT**

**IEC 61331-3-2014
COMPLIANT**

AmRay Supreme Lead-Free was developed solely to be the lightest protective material on the market while maintaining a high standard of protection against scatter or fluorescent radiation within the range of 50-110 KeV.

Bi-Layer Technology consists of two material layers: one of antimony and one of bismuth. While the first layer (antimony, closest to the beam) will block the transmission of scatter radiation between 60-110KeV, the second layer (bismuth, closest to the body) will block the transmission of lower level scatter or fluorescent radiation between 50-90KeV.

AmRay's unique Bi-Layer combination has been proven to be the lightest on offer, while offering optimum protection when considering current testing standards. Combined with the ergonomic design of our apparel, you will be wearing the most comfortable and protective apron on the market.

TRACKING YOUR PERSONAL PROTECTION EQUIPMENT HAS NEVER BEEN EASIER.

The task of tracking Personal Protection Equipment has never been more onerous, as the range of products on the market becomes wider with each passing year.

To simplify the task, without compromising safety or standards, **AmRay** offer all our customers access to **A-Track**, cloud-based software which allows users to easily manage, track and document the inspection of radiation protection garments.

From the moment you log in to **A-Track**, you can clearly see what garments require inspection and when. Once a garment is added to the system, an intelligent tracking device will reduce the amount

of information you are required to enter by pre-populating user input, saving you time and effort.

With an integrated iOS and Android application, retrieving full garment history becomes as easy as taking a photograph. Through the use of QR codes, you can easily retrieve the history of any garment fitted with an **A-Track** label. Just scan the label and you can easily see the garment's full details, including a full history of inspections.

No capital investment is required in hardware and if you are not a smartphone user you can still input the unique code into any web browser and retrieve results via the cloud-based **A-Track** software.

WHEN CUSTOMISATION IS KING, WE TRULY COME INTO OUR OWN.

Our company was initially established because our founder, Helen Johnston, was less than impressed with the one-size-fits-all approach of many suppliers.

Her response was to develop a user-friendly approach to radiation protection, providing customised solutions to healthcare professionals

of all shapes and sizes, and delivering a whole new level of comfortably fitting protective clothing that was truly fit for purpose.

Today, this level of customisation is evident in our multiple fastening solutions, our range of materials, and our colour options offered.

BESPOKE SERVICE.

At AmRay, we fully recognise that one size very definitely doesn't fit all. That's why we offer a fully bespoke service, which ensures that you get the precise fit you need, with the design or colouring that you prefer. Not only does this deliver a more comfortable fit for daily wear, but you'll also enjoy the level of protection that we're rightly famous for.

On choosing an apron, it is important to select a style that best suits your shape. Because there are so many different body types, we offer a variety of models allowing you to create your own individual set by matching any vest with any skirt, in order to maximize your comfort.

Using our customisation feature online, you can select your requirements and receive an automatically generated quote, direct to your inbox.

COLOUR OPTIONS

Flex-DC

Flex-DC is a specially formulated material unique to **AmRay**. Flex-DC gives the user a lightweight flexible material that is hard-wearing and durable. Its flexible properties afford the user complete comfort and ease of movement, avoiding unwelcome bulging from bending, sitting or leaning. A polyurethane coating provides an easy-clean surface to avoid staining and provides high standards of hygiene. All aprons come with a soft nylon lining for added comfort.

Spangly

The Spangly material contains an additional coating to create an easy-clean surface resistant to staining. The Spangly material is hard-wearing, durable and its easy-clean surface promotes higher standards of hygiene. All aprons come with a soft nylon lining for added comfort.

Nylon

Sizing Chart

The following sizing chart caters for our most popular sizes. If you need help selecting the right size, please refer to the guidelines on the right hand side of the chart or the short video on our website. As we manufacture all our garments to accommodate any size and shape, feel free to send us your measurements and we will assist you in choosing the most suitable radiation protection apron for you.

Adults Sizing Chart:

SEMI-WRAP (MODEL 01 & 01F) / BACKSAVER (MODEL 02) / COAT APRON (MODEL 06)

	XS	S	M	L	XL	XXL
Size	91	97	107	113	120	127

Eyewear

The use of quality radiation protection eyewear is essential to protect the human eye, which is a sensitive part of the body and vulnerable to the effects of radiation. AmRay offer a wide range of stylish and practical eyewear, with or without prescription, and with options such as engraving and fog-free coating.

Max+

Max+ radiation protective glasses offer a stylish wrap-around frame constructed of high-impact TR-90 nylon. It also comes with standard high quality, distortion-free SF-6 Schott glass radiation-reducing lenses. The Model Max+ fits best for small to medium style heads.

53 Wrap

Model 53 Wrap radiation protective lead glasses have a contoured wrap frame for a secure fit. Leaded glass lenses and side shields provide optimal radiation protection while the lightweight design and flexible nylon frame ensure style and comfort.

Flex 63

The ever-popular wrap style incorporating built-in splash side shields for safety. This product offers standard high-quality, distortion-free SF-6 Schott glass radiation-reducing lenses.

Fitover

Our "Fitover" radiation protective glasses offer a comfortable, lightweight, and durable design that fits over prescription eyewear. The frame is constructed of durable TR-90 nylon and offers .50mm Pb lateral protection. This product offers our standard high-quality, distortion-free SF-6 Schott glass radiation-reducing lenses with .75mm lead equivalency.

Curves

Our model "Curves" radiation protective glasses offer a stylish wrap-around frame constructed of high impact TR-90 nylon. They feature rubberized soft grip temple bars for a secure fit and have 8 Base wrap around lenses for full protection around the orbit of the eye. The glasses come with our standard high-quality, distortion-free SF-6 Schott glass radiation-reducing lenses with .75mm lead equivalency. The Model "Curves" fits best for medium and large style heads.

Apron Storage

The correct storage of aprons when not in use will make a significant contribution to their durability. **AmRay** offers different types of storage to suit your needs and keep your aprons conveniently stored and in good condition.

Wall Hangers

When space is a problem, wall-mounted apron hangers are often the solution. Depending on your requirements, **AmRay** offers a choice of 3 or 6 arms. We can offer advice on installing the wall-mounted hanger in the location you require.

Single Hanger (MODEL AMWH3)

Mobile Protective Screens

Mobile Protective Screens are used to provide optimum protection to medical personnel during procedures. As they are used within various healthcare departments the requirements for a cleanable surface is of the upmost importance. All **AmRay** Protective Screens are constructed and finished with a encapsulated, antibacterial surface which is both durable and cleanable.

AMS3040

- ✓ Sliding adjustable lower screen to maximize protection at table side
- ✓ 0.5mm protection to upper and lower sections as standard
- ✓ Easy move castors with brake
- ✓ Ideal where overhead suspension is not available

X-Ray Protective Control Booth

An essential unit within a X-Ray suite. With a properly designed screen the radiographer can easily control the X-Ray machine while continuously observing the patient.

Each **AmRay** control booth is uniquely designed for the space it is to be fitted in. A 3D design is provided prior to the unit going into production so the ease of workflow can be considered.

X-Ray Protective Glass

AmRay Glass provides high-quality, transparent and safe protective shielding against X-ray radiation for medical, technical, and research applications.

Its high lead and barium content, and wide thickness range, provides optimum shielding against radiation from equipment operating in the 80 to 300 kV range and optional 511 to 1250 kV for use within PET.

Curtains & Drapes

Block the radiation but not your accessibility. These lead vinyl curtains are useful in fluoroscopy suites, emergency rooms, hospitals, industrial radiography locations, and anywhere low-level or secondary radiation is present.

Crafted from lead vinyl, you can select from either doorway curtains or room divider curtains, depending on your specific needs.

Hyposcopic Apron

The table protection screens reduce operator exposure to radiation emissions from below the table and are supplied with a removable upper screen to protect against scatter radiation from the patient's body. Made from a plastic coated lead rubber, the screen is a flexible solution to operator protection.

PRODUCT OVERVIEW

- ✓ Flexible lower screen of plastic coated lead rubber - 0.5mm Pb
- ✓ Mounted on easy remove arm
- ✓ Additional rubber strips can be added to suit alternative size requirements
- ✓ Removable upper screen to protect against scatter radiation from the patient's body
- ✓ Dimensions: Lower screen: 63x75cm (WxH)
Upper screen: 63x22.5cm(WxH)

Table Cover 1

Basic lower body shield style. This versatile design fits any operating tables including those smaller and narrow sizes.

PRODUCT OVERVIEW

- ✓ Velcro closure system
- ✓ Protective section height/ length (lead panels all together as full protection shield): 72 cm
- ✓ Full protective shield dimensions: 65cm x 72cm
- ✓ Standard protection level supplied: .5mm Pb
- ✓ Lead panel overlapping: 2.5cm
